Material-Data-Sheet

Material: Linnotam Stand 05/2020

Short description of material

LINNOTAM produced in molds on the basis of direct polymerization with a partially crystalline structure. The high crystallite content leads to excellent mechanical properties such as very high abrasion & wear resistance, hardness and stiffness.

Application examples

- Bridge and sliding plates for transitions
- · Spindle nuts for door systems
- Plain bearings
- Interior coverings

The content of this datasheet are meant to give an overview of the product's properties. It reflects our current knowledge and may not be complete. The values should be taken as guide values because they are very depent on surrounding conditions and machining methods. The values are in no way a legally binding assurance of the product's properties or its suitability for use in a specific application. All stated values are average values established from many individual tests. They are based on a temperature of 23°C and 50% RH. For specific applications, we recommend determining suitability by means of a trial.
